CAD-CAM solutions for CNC machines
TECNO PROGRAM develops and produces the Pegasus CAD-CAM® brand, a CAD-CAM software used in many contexts and production sectors for the processing of wood, marble, metal and other materials.

Thanks to the experience of its team, the company is able to provide a high quality and easy to use product, and to offer solutions tailored to specific needs.

The satisfaction of TECNO PROGRAM customers and partners is our primary goal and also our flagship. We try to make the complex simple by designing the CAD-CAM software closest to the needs of its user.
**TECNO PROGRAM** initially deals with support and training service for CNC machines, then begins to resell and distribute CAD/CAM systems and softwares.

Over time, the company encounters an increasing need for **customized products**: thus the idea of designing and developing its own proprietary software.

Today **TECNO PROGRAM** is **one of the few Italian software-houses** that carries out this type of development, working together with CNC machines and robot manufacturers, CNC controls producers and final users.
We design a high quality, reliable and easy to use product, which is also constantly evolving in order to serve the ever-changing needs of our customers.

We offer multiple modules and versions, suitable for diversified contexts.

We guarantee qualified and timely technical support.

We provide solutions and applications tailored to specific needs.

What we give value to

We value the work of PEOPLE and we focus on their needs, we support our customers and partners in solving problems, we promote the professional and personal growth of our team through teamwork and constant collaboration.

We pursue the QUALITY of work, of operational processes, of the final product.

We believe that LISTENING is the best way to understand problems and find the most suitable solutions.

It is essential for us to work with PROFESSIONALISM and intellectual honesty, making sure that this is reflected in our daily work.

We try to never stand still and to study practical and INNOVATIVE answers to the issues that arise in our technological and productive context.
The products of the PEGASUS CAD-CAM® brand are made in numerous versions and are able to handle a wide range of processes for diversified materials.
Equipped with an online guide that supports the user in the learning and use phases, they are easy to use even for those who do not have particular computer skills.
The software is organized in modules with specific operational sections - CAD 2D and 3D, CAM, Simulation and Post-Processing (creation of the CNC machine program) - so that the user is guided through each step of the process.

Our solutions

Available in the following versions:
- MILLING, ROTARY, COUNTERTOPS, CUTTING, WATERJET

Available in the following versions:
- LATHE, MILLING, PANEL, DOORS

Available in the following versions:
- MILLING and LATHE
Industries and areas of application

PEGASUS CAD-CAM® is used in many fields to create a great variety of products.

PEGASUS CAD-CAM® is designed to meet the needs of manufacturers and users of CNC machines and robots, manufacturers of numerical controls.

- Macchines up to 5 continuous axes
- Machining centers
- Waterjet machines
- Bridge saws
- Robots
- Routers
- Drilling machines
- Lathe machines up to 5 axes
Our team is made up of young engineers, mathematicians, technicians who have acquired over the years a growing experience in the development and production of CAD-CAM products: algorithms and data structures for CAD drawing and 3D modeling, development and design of graphic interfaces and user interaction both on the desktop and on the machine side.

Since our customers operate in a wide spectrum of processes and contexts, our team had to deal over time with a very high and diversified number of cases and problems, acquiring an increasingly specific competence and ever greater flexibility: this makes the services that the company is able to offer fast and efficient.
TECNO PROGRAM markets its products in Italy and abroad. These are just some of the many companies that have chosen our services and our software to match their machines and numerical controls, promoting it to their customers.
What they say about us

PEGASUS has been an indispensable tool, giving our Prussiani machines the capability to carve beautiful works of art for buildings that will last for centuries.

BR. GABRIEL MARIE, NEW MOUNT CARMEL FOUNDATION

With PEGASUS we were able to not just create shapes that we couldn’t before with 5 axis machining, but also extract the full potential of our 3 axis machines.

DIEGO OLIVEIRA SANTOS, NATSTONE

We are very satisfied with PEGASUS, especially because the support is very good and very responsive to customer requests. Also, in contrast to some other programs, PEGASUS has a good way to deal with the rest material, which is a very important point for us.

MARKUS SCHWARZ, STEIN SCHWARZ

PEGASUS CAD-CAM is an efficient and robust tool of countless capabilities, giving us the power to create projects of all scales; from a simple 2D contouring to the machining of a sculpture. Each step of the workflow is carefully designed, including a very accurate and enlightening simulation. Also, the customer support provides instant and instructive solutions to any of our requests.

ANGELO PAPPOS, FHL

I’ve been using PEGASUS CAD-CAM for years, it’s a powerful and dynamic software with countless tools and working strategies. It is equipped with an intuitive interface, clean graphics, and a very efficient simulator that gives me full control of all processes. I must also point out the flawless work of the technical support, very prepared and helpful.

VITTORIO DELLA TOMMASINA, DR MARMI
